Old Memory: Better to buy more

Unexpected persistent tightness in legacy memory supply is driving panicked purchasing by multiple enterprise customers. We reiterate our bullish view and raise PTs across our coverage.

Key Takeaways

- DDR4 buyers may build even larger demand buffers amid prolonged supply tightness.
- MLC NAND shortages are forcing enterprise HDDs to use SLC NAND, indicating stronger demand.
- NOR supply is increasingly concentrated among Taiwan vendors, given reduced output from the US.

DDR4 stronger orders from enterprise customers: We upgraded both Nanya Tech and Winbond back to OW on May 28 ([link](#)), given the ongoing tightness in DDR4. We now see enterprise customers securing supply as early as possible amid fears of shortages. Channel inventory remains low at under two weeks. This points to further DDR4 price increases into 4Q, following the double-digit monthly uptrend.

SLC NAND likely to see stronger demand from HDD: We noted that high-density SLC NAND can support datacenter eSSD ([link](#)). In addition, given the MLC NAND shortfall, enterprise HDDs are likely shifting to high-density SLC NAND. Enterprise HDDs previously used MLC NAND for firmware, hot data, and defect mapping. This shift reinforces continued pricing momentum into 4Q, following the 50–60% increase in 3Q.

NOR flash pricing increase led by Macronix, with potential supply–demand widening: We continue to see strong pricing increases from Macronix, driven by a shift toward NAND from NOR. We also see Micron reducing NOR supply into 2H, likely reallocating capacity to DRAM and NAND. At the same time, Vera Rubin rack ramp-up in 2H will require 50%+ higher NOR content versus Grace Blackwell racks. We therefore expect NOR pricing to rise 30–40% in 3Q and continue into 4Q.

Stock implications – we raise our earnings and PTs across the board: **Winbond:** PT raised to NT\$288; 2026/27/28 EPS raised by 4%/17%/24%. **Nanya Tech:** PT raised to NT\$550; 2026/27/28 EPS raised by 7%/15%/14%. **Macronix:** PT raised to NT\$220; 2026/27/28 EPS raised by 34%/20%/21%. **GigaDevice:** PT raised to Rmb888; 2026/27/28 EPS raised by 30%/46%/53%. **PSMC:** PT raised to NT\$111; 2026/27/28 EPS raised by 4%/48%/62%.

Winbond: Estimate Revisions and Quarterly Financials

We raise our 2026/27/28 EPS estimates by 4%/17%/24% respectively. This reflects stronger than previously expected memory pricing strength across DDR4, NOR flash, and SLC NAND. We now expect DDR4 pricing to rise further into 4Q, post the double digit monthly pricing uptrend. SLC NAND pricing uptrend is highly likely to continue into 4Q, post 50-60% hike in 3Q. NOR pricing could be hiked by 30-40% in 3Q and even into 4Q.

Winbond: Valuation Methodology

We raise our PT to NT\$288 from NT\$222: We continue to apply P/B multiple methodology to derive our price target, in line with our approach for Greater China memory IDM peers and in view of the industry's high earnings volatility. Our new price target (base case scenario value) implies 6.2x 2026e BVPS and 3.4x 2027e BVPS vs. our prior target multiple of 5.5x 2026e BVPS, as we think DDR4 pricing strength and SLC NAND/SiCap opportunities could drive re-rating. We raise our bull case value to NT\$342 (7.3x our 2026e BVPS) and our bear case value to NT\$118 (2.5x our 2026e BVPS).

Risk Reward – Winbond Electronics Corp (2344.TW)

DDR, NOR and SLC NAND pricing upside; long-term opportunities in CUBE

PRICE TARGET NT\$288.00

Base case, 6.2x 2026e P/B. This method is in line with the approach we adopt for Greater China memory IDM peers, in view of the industry's high volatility. We believe the stock merits a multiple beyond the high end of its historical band of 0.5-1.5x since 2017, as we are seeing DRAM pricing upside, a sustainable NOR price hike, and opportunities in SLC NAND and SiCap foundry business.

NOR Flash pricing and DRAM prices rebound more in the next 12 months: NOR Flash rises dramatically. DRAM prices continue to rise drastically within the next 12 months, with 25nm accounting for >80% of sales.

BASE CASE

NT\$288.00

6.2x 2026e BVPS

Margin expansion benefiting from the memory up-cycle: 1) NOR Flash pricing rises significantly in the next 12 months; and 2) DRAM prices rise significantly in the next 12 months.

BEAR CASE

NT\$118.00

2.5x 2026e BVPS

NOR Flash prices face pressure in the next 12 months; DRAM market back to oversupply, with slower technology migration: 1) NOR Flash shows price declines; and 2) DRAM prices drop in the next 12 months.

OVERWEIGHT THESIS

- We expect DDR3 and DDR4 price increases to continue in 2026. The supply/demand gap should widen into 2H26.
- We see NOR price hikes continuing throughout 2026.
- High density SLC NAND pricing is catching up, and we now expect a larger TAM from data center applications.
- We share management's view that CUBE could be meaningful in 2026, given engagement with multiple foundry partners and customers.
- We see potential for several headwinds ahead for the logic business.
- Our PT implies 3.4x 2027e P/B.

GigaDevice: Estimate Revisions and Quarterly Financials

We raise our EPS estimates for 2026/27/28 by 30%/46%/53%. This reflects stronger-than-expected memory pricing across DDR4, NOR flash, and SLC NAND. We now expect DDR4 pricing to rise further into 4Q, following the double-digit monthly uptrend. SLC NAND pricing is likely to continue rising into 4Q, after the 50–60% increase in 3Q. NOR pricing could increase by 30–40% in 3Q and extend into 4Q.

GigaDevice: Valuation methodology

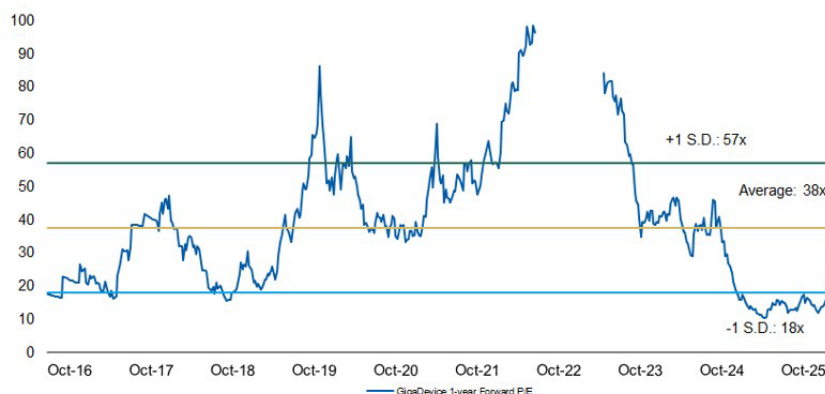

We raise our price target (base case) to Rmb888: We continue to derive our price target from a residual income model, which we believe best captures the stock’s long-term value. Our key assumptions include a cost of equity of 8.9% (beta 1.1, risk-free rate 2%, and risk premium 6%), a payout ratio of 40%, a medium-term growth rate of 16.4%, and a terminal growth rate of 3.0% (all unchanged). Our new price target implies a 2026e P/E of 53x, above the historical average of 40x since 2016. Our bull case value rises to Rmb1,542 from Rmb1,016, and our bear case value increases to Rmb648 from Rmb427.

PRICE TARGET Rmb888.00

Our price target is our base case value, derived from our residual income model. Key assumptions: cost of equity of 8.9% (beta 1.1, risk-free rate 2% and risk premium 6%), a payout ratio of 40%, medium-term growth rate of 16.4%, and a terminal growth rate of 3.0%.

RISK REWARD CHART

OVERWEIGHT THESIS

- We expect GigaDevice to continue to gain share in China's MCU market. Auto MCUs offer bigger opportunities as local self-sufficiency is low.
- We see further NOR Flash pricing upside, and expect GigaDevice NOR quality to catch up in the auto segment.
- Specialty DRAM pricing started to rebound in late 1Q25, and there are opportunities such as wafer-on-wafer specialty memory.
- We believe GigaDevice will ramp up 16G LPDDR4 and 32G DDR4 at CXMT's Gen 4 platform in 2027.
- Our price target implies 2026e P/E of 53x, above the historical average of 38x since 2016 but within +1 S.D. of 57x.

Nanya Tech: Estimate Revisions and Quarterly Financials

We raise our EPS estimates by 7% for 2026, 15% for 2027, and 14% for 2028. We now expect the 3Q DDR4 price increase to exceed prior expectations, with at least a 30% Q/Q rise versus the previous 20% assumption. DDR4 pricing is likely to remain elevated into 1H27, as the supply-demand gap will be difficult to close by then.

Nanya Tech: Valuation Methodology

We raise our price target (base case scenario value) from NT\$380 to NT\$550. Our price target reflects BVPS multiples of 4.50x for 2026 and 2.51x for 2027, versus ROE of 77% for 2026 and 57% for 2027. We expect DDR4 pricing strength and LTAs to drive a re-rating. We raise our bull and bear case values from NT\$805 and NT\$210 to NT\$1,160 and NT\$305, respectively, implying 9.50x and 2.50x 2026e BVPS.

DDR4 S/D becoming more favorable; OW

PRICE TARGET NT\$550.00

Base case, P/B. We expect the stock to trade at 4.50x 2026, 2.51x 2027, and 2.02x 2028 BVPS, above its average since 2015. We think NTC will benefit from a supply-driven up-cycle as major memory players are exiting the DDR4 market. That should help NTC more than offset the competitive impact from CXMT in the near term.

BULL CASE

NT\$1,160.00

9.50x 2026e BVPS

DRAM prices strong; faster-than-expected 1a/1b nm ramp; competition from Korea and China is a non-factor: DRAM pricing becomes very strong in 2026 thanks to production cuts and relief of inventory pressure. NTC's utilization rate returns to the 100% level. Korean and Chinese competitors all exit the consumer DRAM market.

BASE CASE

NT\$550.00

4.50x 2026e BVPS

Strong DRAM cycle: Major DRAM players now plan to exit the DDR4 market, which positions Taiwanese players to benefit. We expect price-hike momentum to continue through 2026, with widened supply shortage into 2H26.

BEAR CASE

NT\$305.00

2.50x 2026e BVPS

Specialty DRAM demand becomes weak in 2026 with intensifying Chinese competition: Nanya Tech could face more pressure from pricing and technological competition amid a weak cycle. Inventory remains at historical peak levels. SK hynix and Chinese DRAM competitors take all the market share in China. Nanya Tech's utilization rate falls to the 40% level.

OVERWEIGHT THESIS

- Major memory suppliers are gradually exiting the DDR4 market, benefiting existing Taiwanese players, including Nanya Tech.
- We expect DDR4 shortage into 2H26 to help NTC more than offset the competitive impact from CXMT in 2026. The supply shortage appears set to widen into 2H26.
- Our price target reflects BVPS of 4.50x for 2026, 2.51x for 2027, and 2.02x for 2028.

PSMC: Earnings Estimate Revisions

We raise our EPS forecasts for 2026/27/28 by 4%/48%/62%: This reflects stronger-than-expected DDR3/DDR4 memory pricing. We now expect DDR4 pricing to rise further into 4Q, following the double-digit monthly uptrend. We also incorporate a more meaningful revenue contribution from the 3D AI foundry business (including SiCap, wafer-on-wafer, and HBM PWF), accounting for 5%/10%/14% of total revenue in 2026/27/28.

PSMC: Valuation methodology

We raise our price target to NT\$111 from NT\$88: We incorporate our revised estimates and maintain our P/B valuation methodology. Our new target is based on a 2026e P/B of 2.6x, up from 2.1x previously, and above the historical average of 1.5x since 2021, reflecting our strong conviction in shipments, ASP improvements, and the emerging 3D AI foundry business. We believe PSMC is well positioned to benefit from its Micron partnership, including front-end migration to the 1y process node and back-end opportunities in advanced DRAM production (e.g., HBM). The company is also catching up with the DRAM pricing upcycle.

Revenue growth with gross margin improvement: Our assumptions include: 1) a revenue CAGR of 36.4% in 2025-28; 2) a gross margin increase to 43% by 2028; 3) a mature node foundry up-cycle; 4) additional contribution from 3D AI foundry business; 5) specialty DRAM pricing continuing to increase.

BEAR CASE

1.3x 2026e BVPS

Revenue decline with gross margin erosion: Our assumptions include: 1) a revenue CAGR in the single digits (%) in 2025-28; 2) gross margin of <10% by 2028; 3) mature node foundry capacity no longer in shortage; 4) delays in revenue contribution from 3D AI foundry business; 5) decreases in specialty DRAM pricing.

OVERWEIGHT THESIS

- We expect a mature node capacity shortage in 2H27, reflecting fast growth of AI power ICs as a key part of future AI infrastructure.
- 3D AI foundry business is expected to be a major revenue contributor - we expect it to make up 5%/10%/14% of total revenue in 2026/27/28.
- We see specialty DRAM price hikes continuing throughout 2026.
- Our new target is based on 2026e P/B of 2.6x, up from 2.1x - higher than the historical average of 1.5x since 2021, reflecting our optimistic view on improved pricing and utilization.

Macronix: Earnings Estimate Revisions

We raise our 2026/27/28 EPS forecasts by 34%/20%/21%: This reflects stronger-than-expected memory pricing across NOR flash and SLC/MLC NAND. SLC/MLC NAND pricing is likely to continue rising into 4Q, following the 50–60% increase in 3Q. NOR pricing could increase by 30–40% in 3Q and extend into 4Q.

Macronix: Valuation Methodology

We raise our price target to NT\$220 from NT\$202: We continue to use a P/B multiple methodology to derive our price target, in line with our approach for Greater China memory IDM peers and in view of the industry's high volatility. Historically, forward P/B has had a similar trend vs. ROAE, and as we expect a net profit turnaround driven by elevated prices, we believe the stock will trade up to 7.0x 2026e BVPS (same as our prior target) vs. its historical band of 0.5x-1.5x since 2017.

We raise our bull case value to NT\$355, which is 11.3x our 2026e BVPS, and our bear case value to NT\$130, which is 4.1x our 2026e BVPS.

Risk Reward – Macronix International Co Ltd (2337.TW) Top Pick

Top Pick; OW on legacy Flash opportunities

PRICE TARGET **NT\$220.00**

Base case, P/B, in line with our Greater China memory coverage, due to the memory industry's cyclical nature. We apply a target multiple of 7.0x to our 2026 BVPS estimate, vs. its historical average of 1.5x since 2017. We continue to believe the P/B target is justifiable, as the MLC and legacy TLC NAND could be in greater shortage into 2H26, with under supply easily going up to 40%. The only supplier which could fill the gap remains Macronix.

OVERWEIGHT THESIS

- MLC and legacy TLC NAND could be in greater shortage into 2H26, with under supply easily going up to 40%. The only supplier which could fill the gap in our view remains Macronix. Pricing for MLC and legacy TLC could rise over 200% from 1Q26 to 4Q26.
- We expect low-single-digit NOR undersupply throughout 2026, driven by capacity cannibalization from other high-margin products.
- ROM may benefit from the Nintendo Switch 2, which started selling in June 2025.
- We view the current P/B valuation as attractive given the strong near-term outlook.
